

**February 27, 2021**

**The NY Post** reported 13 deaths in Norway - all nursing home patients after being injected with Pfizer COVID-19 vaccine. The NY Post report is based upon information from Johns Hopkins University. All 13 were 80 years old or older. As of last month over 30,000 people have received the virus vaccine in Norway.

“We are not alarmed by this,” Steinar Madsen, medical director of the Norwegian Medicines Agency, told Norwegian broadcaster NRK. “It is quite clear that these vaccines have very a low risk, with a small exception for the frailest patients.”

### **From Swiss-Medic Website**

As at 21 January 2021, Swissmedic has received 42 reports of suspected adverse drug reactions (ADR) in connection with the first COVID-19 vaccinations in Switzerland. Experienced medical specialists at Swissmedic, in collaboration with the regional pharmacovigilance centres, are conducting an in-depth analysis of all the reports of suspected adverse reactions to the COVID-19 vaccines. So far this analysis has not resulted in any change in the positive benefit/risk ratio of the vaccines.

Swissmedic has received a total of 42 reports of suspected adverse drug reactions (ADR) in connection with the first COVID-19 vaccinations in Switzerland as at 21 January 2021. Most of the reports were not serious (26, 62 %) and involve mild reactions that are already known from the clinical trials. 16 reports (38 %) were classified as serious and five reports were associated with a fatal outcome. The patients concerned in these five cases were aged between 84 and 92 and, according to the latest available information, died of illnesses that commonly occur at this age. Despite a chronological correlation with the vaccination, there is no concrete evidence to suggest that the vaccination was the cause of death.

As at 21 January 2021, almost 170,000 people had received a dose of a vaccine against COVID-19 in Switzerland according to the Federal Office of Public Health (FOPH). In line with the current vaccination strategy, people who are especially vulnerable and with the highest risk are being vaccinated as a priority, i.e. those aged over 75, those with chronic diseases and those who live in a retirement or care home. When such a group of exclusively vulnerable individuals is vaccinated within a short period, one would expect, for purely statistical reasons, a certain number of fatalities to occur in a temporal relationship with the COVID-19 vaccination. In Switzerland, around 2,300 people aged over 85 die over a period of 4 weeks (interval between two vaccinations).

The reports of adverse reactions received to date and subjected to careful analysis do not change the positive benefit-risk profile of the COVID-19 vaccines. Known side effects of COVID-19 vaccines are listed in the product information texts published at [www.swissmedicinfo.ch](http://www.swissmedicinfo.ch).

### **Swiss-Medic - Advice for healthcare professionals**

By: Thomas Paine

The elderly over 80 are dying shortly after receiving the vaccine inoculations in totally disproportionate numbers from other age groups. Why? Could it be "cytokine storm"? Would we know what this is if it wasn't being first published in the Israeli media?

Why are the American medical professionals, U.S. Government in the form of the FDA, CDC and even Homeland Security NOT explaining this potential danger in the vaccination of hundreds of American people, even NOW, 22 months after the first appearance of the Chinese Communist Virus a/k/a/ COVID-19 within the United States?

I find it unbelievable that a respected database such as Swiss-Medic where their nation's doctors go to seek medical information would make the comment, "*When such a group of exclusively vulnerable individuals is vaccinated within a short period, one would expect, for purely statistical reasons, a certain number of fatalities to occur in a temporal relationship with the COVID-19 vaccination. In Switzerland, around 2,300 people aged over 85 die over a period of 4 weeks (interval between two vaccinations).*" What this means is it's okay if 2,300 elderly die each MONTH between shots. Is anyone telling these old folks, "Hey, listen up - those with hearing aids turn up the volume. We are offering you this two shot vaccine from our friends in America. The shots are 30 days apart to save your life from the dreaded virus, but within a month, some of you will be absolutely totally dead from the American made vaccine. Okay, which of you old folks want to take a shot at getting the shot and not be dead two or three weeks from now? Now, don't be shy! Just raise your hands!
